Vivek Dilip Jamnik. A Descriptive Study to assess The Effectiveness of Structured Teaching Programme on Knowledge Regarding Complications of Alcoholism among Higher Secondary school students in Selected Schools in Nagpur. J Surg. Nurs. 2025; 14(2): 00-00.

## ABSTRACT

**Background of the study:** Alcoholism is one of the major global health problems. From a public health perspective, alcohol consumption has become a major burden both in terms of morbidity and mortality in most parts of the world, alcohol consumption has health and social consequences via intoxication, alcohol dependence, and other biochemical effects of alcohol, which lead to traumatic outcomes that kill or disable the individual at a young age. Impairment may involve physiological, psychological or social dysfunction. psychologically speaking, alcoholism has less to do with "how much" someone is drinking and more to do with what happens when they drink. If you have problems when you drink, you have drinking problem.

Alcohol is one of the most widely used drug substances in the world. Alcohol use and binge drinking among our nation's youth is a major public health problem. Alcohol is one of the commonly consumed intoxicating substances in India. Alcoholism is a primary, chronic disease with genetic, psychological, and environmental factors influencing its development and manifestations.<sup>4</sup> Alcohol problems are associated with life style and socio-economic conditions of people. These are becoming more - prevalent particularly in higher secondary school students boys mainly because of their risk-taking behavior and more over the emotional control of family; the moral control of school and the social control of community are declining.

Alcohol causes 1.8 million deaths a year, which represents 3.2% of all deaths worldwide. Unintentional injuries account for about a third of the deaths from alcohol. Alcohol is the third most common cause of death in developed countries. In the limited number of developing countries where overall mortality is low, alcohol is the leading cause of illness and disease. Damage to human life is often described in terms of loss of "disability-adjusted life years" (DALYs). This measure takes

Date: 13.01.2025

To,

The Respected Mam,

We are writing to thank you for taking the time to serve as a peer reviewer for Journal of Nurse Midwifery and Maternal Health ISSN (Print) 2454-7506 (Online) 2455-8389 from 13 JAN 2025. The efforts of reviewers like you make it possible for us to publish the following research articles in the journal. And your review comments are helping authors to hone their manuscripts and advance their research efforts.

Article title

1. Knowledge regarding fetal movement counting on prenatal attachment and maternal worries among antenatal mothers.
2. Effectiveness of structured teaching programme on knowledge and attitude regarding postpartum intrauterine contraceptive device among married women in reproductive age group

We greatly appreciate your efforts and look forward to working with us in the future.

With regards,

Yours faithfully

Rajesh Kumar Editorial Manager
